🐘 PHP Setup

Install PHP with MariaDB support

```
sudo apt install php-fpm php-mysql -y
```

> PHP-FPM, or PHP FastCGI Process Manager, is an advanced and high-performance FastCGI implementation for PHP. It is specifically designed to manage PHP processes and handle requests efficiently, especially in high-traffic web environments.

Install `php-curl` (for HTTP request)

- `sudo apt-get install php-curl`
- `sudo systemctl restart nginx`
- `php -m | grep curl`
